

Exercise: Google Gemini & NotebookLM

Goal: Provide hands-on experience using Gemini AI and NotebookLM to research a topic and create content.

Scenario: Imagine you are a content creator for a podcast series aimed at helping Micro, Small, and Medium Enterprises (MSMEs) in Southeast Asia. Your task is to research a specific use case of AI and draft a podcast episode outline.

Step-by-Step Exercise Guide (~10 minutes)

1. Research with Gemini AI (~3 minutes)

Prompt 1 – General Research

“Identify three specific and practical ways MSMEs in Southeast Asia are currently using AI to improve their business operations. Focus on areas like customer service, e-commerce, or marketing. Provide recent examples from countries like Vietnam, Indonesia, or the Philippines, citing the source.”

Tip: Encourage participants to review Gemini’s output for relevance and freshness. Look for variety and specific examples.

Prompt 2 – Deep Dive

“Based on the previous results, choose one use case (e.g., AI chatbots for customer service) and find more detailed information. Search for key benefits, common challenges, and a real-world case study of an MSME successfully implementing this technology in Southeast Asia.”

Tip: This helps them refine the topic and gather detailed material for the podcast outline.

2. Content Generation with NotebookLM (~3 minutes)

Upload & Paste Research

- Copy and paste the selected Gemini research results into a new NotebookLM document.

Prompt 3 – Podcast Outline

“Using the research you gathered from Gemini, create a structured outline for a 5-minute podcast episode titled ‘AI for MSMEs: [Chosen Use Case]’. Include:

- Introduction – catchy hook and brief explanation of the AI use case*
- Problem – the business challenge this AI solution addresses*
- Solution – how the AI tool works and its key benefits*
- Case Study – the real-world example and impact*
- Call to Action – actionable advice for listeners to get started with AI.”*

3. Generate an Audio Overview with NotebookLM (~4 minutes)

After NotebookLM produces the outline:

1. In the NotebookLM interface, click **Audio Overview** (in the **red box below**).

2. The system will automatically convert the outline into an audio podcast-style summary.
3. Play or download the generated audio to experience how text research can quickly become spoken content.

Key Takeaways

In about ten minutes, participants will have:

- **Researched with Gemini AI** to uncover real AI use cases for MSMEs.
- **Refined and organised** the information for a podcast script in NotebookLM.
- **Created an audio podcast-style summary**, demonstrating how AI tools can transform written research into engaging audio content.

This fast, practical exercise shows how AI can streamline research, content creation, and multimedia production, skills directly applicable to supporting MSMEs in Southeast
