Introduction

Who we are

<https://projectasiadata.com/> by <https://blackstormco.asia/>

PADDY TAN

Co-Founder

A business and technical strategist, armed with more than 15 years of experience in helping businesses to propel to a greater height. Being both a serial entrepreneur and investor, Paddy is able to dissect a challenge into pieces and formulate solutions in various perspectives.

 <https://www.linkedin.com/in/paddytan/>
 paddy@projectasiadata.com

JESLIN BAY

Co-Founder

A business scaler with expertise in business development, human resource, market entry, and business structuring in Southeast Asia. Jeslin is passionate about propelling businesses to greater heights using innovative solutions.

 <https://www.linkedin.com/in/jeslin-bay/>
 jeslin@projectasiadata.com

KOO PING SHUNG

Co-Founder

Koo Ping Shung has 20 years of relevant experience in Data Science and Artificial Intelligence. He has experiences from a wide variety of industries in how data and AI is being used. His experience also spans the data value chain, from data collection, data management, and data governance to insights & machine learning model implementation.

 <https://www.linkedin.com/in/koopingshung/>
 koo@projectasiadata.com

Curriculum Overview

Essential Modules	Optional Modules
Module 1: Artificial Intelligence (AI) - The Basics and Use Cases	Module 5: Advanced Data Management & Governance for AI
Module 2: The AI Adoption Journey - Steps for Business Owners	Module 6: Building an AI-Ready Culture & Workforce Transformation
Module 3: Using AI Responsibly - Ethical & Governance Principles	Module 7: AI Project Risk Management & Mitigation
Module 4: Key Considerations & Framework for Successful AI Deployment	

Our Design Principles

- 1 Encourage AI Adoption by Combining Literacy with Business Relevance:** After getting all the MSMEs on the same page with a quick revision on foundational AI, we will highlight **tangible benefits and strategic implications**, helping participants see AI as a vital tool for their company's growth rather than just a complex technology. The focus is on tackling and motivating MSMEs to adopt AI into their business processes.
- 2 Showcase Practical and Impactful Use Cases:** We will utilize a diverse range of real-world examples and **relevant use cases from various business sectors**. These examples will illustrate how AI can be directly applied to enhance operations, marketing, customer service, and overall productivity, demonstrating clear and actionable pathways for adoption.
- 3 Provide Clear, Concise Steps for Implementation:** The curriculum will guide participants through the AI adoption journey with clear and concise steps. We will focus on a **practical, hands-on approach** that enables them to adopt AI tools and launch small-scale projects without feeling overwhelmed, ensuring they leave with an actionable plan to begin their AI journey. This principle will serve as the foundation for developing the program's practical material.

Curriculum Outline Definitions

Each module consists of the following elements in the **Detailed Curriculum** document:

Essential Modules		Optional Modules
1	Title	The official name of the module that clearly conveys its topic or focus. Please retain the title.
2	Module Description	A brief overview summarizing what the module covers and why it matters.
3	Goal	A single statement of the overall purpose or intended outcome of the module.
4	Learning Objectives	Specific, measurable skills or knowledge participants should gain by the end.
5	Module Outline	A structured list of key sub-topics, or activities included in the module.
6	Suggested Duration	The recommended total time needed to complete the module effectively. Please adjust accordingly.

2

Essential Modules

Essential Modules

Module 1

Artificial
Intelligence (AI) -
The Basics and
Use Cases

Module 2

The AI Adoption
Journey - Steps for
Business Owners

Module 3

Using AI Responsibly -
Ethical & Governance
Principles

Module 4

Key Considerations &
Framework for
Successful AI
Deployment

Module 1: Artificial Intelligence (AI) - The Basics and Use Cases

Suggested Duration: 77 mins

- **Description:** This module will do a quick revision on what Artificial Intelligence is so far. We'll explore the different types of AI, such as Machine Learning, Deep Learning, and Generative AI, with practical examples for each. The module also covers the key business reasons for adopting AI, like increasing efficiency, improving customer experience, and gaining a competitive edge. Finally, we'll dive into common AI use cases across different business functions, including customer service, marketing, operations, and finance.
- **Goal:** Provide the foundational knowledge for Business Owners to be aware of AI and its impact on businesses. This encourages MSMEs to start looking to adopt AI into their business.

Learning Objectives:

Upon completion of this module, business owners will be able to:

- Understanding what AI is about.
- Distinguish between the main types of AI (Machine Learning, Deep Learning, NLP, Computer Vision, Generative AI) and recognize common examples of each.
- Articulate at least five compelling business reasons for considering AI adoption (e.g., efficiency, improved decision-making, enhanced customer experience).
- Identify and give examples of how AI can be applied to common business functions across various departments (e.g., customer service, marketing, operations, finance).
- Evaluate potential areas within their own business where AI could generate significant value and kick-start their AI adoption.

Module 1: Artificial Intelligence (AI) - The Basics and Use Cases

ESSENTIAL MODULE

Suggested Duration: 77 mins

1.1 What is AI?

1.1.1 Revising the Basics (8 mins): What is underneath AI? What does it need to work? Good quality data, Selection of Algorithm, and Structuring the Output.

Module 1: Artificial Intelligence (AI) - The Basics and Use Cases

1.2 Types of AI (Simplified)

1.2.1 Machine Learning (ML) (8 mins): AI that learns from data without explicit programming. Supervised (labelled data), Unsupervised (unlabelled data), Reinforcement (behavior). *Examples: Recommendation engines (e.g., Netflix), fraud detection.*

1.2.2 Deep Learning (DL) (5 mins): A subset of ML, using neural networks for complex pattern recognition. Cover the general structure of neural network, then expand to Deep Learning. *Examples: Image recognition, natural language processing.*

1.2.3 Natural Language Processing (NLP) (3 mins): AI that understands, interprets, and generates human language. Two areas - Natural Language Generation & Natural Language Understanding. *Examples: Chatbots, sentiment analysis, language translation.*

1.2.4 Computer Vision (CV) (3 mins): AI that enables computers to "see" and interpret visual information. *Examples: Facial recognition, quality control in manufacturing.*

1.2.5 Generative AI (GenAI) (5 mins): AI that creates new content (text, images, audio, code). *Examples: Content creation, design, personalized marketing messages.*

Module 1: Artificial Intelligence (AI) - The Basics and Use Cases

1.3 Why Adopt AI? The Business Imperatives

1.3.1 Increased Efficiency & Automation (3 mins): Automating repetitive tasks, freeing up human resources.

1.3.2 Enhanced Decision-Making (3 mins): Data-driven insights for better strategic and operational choices.

1.3.3 Improved Customer Experience (3 mins): Personalization, 24/7 support, faster response times.

1.3.4 Innovation & New Revenue Streams (3 mins): Creating new products/services or optimizing existing ones.

1.3.5 Competitive Advantage (3 mins): Staying ahead in a rapidly evolving market.

Module 1: Artificial Intelligence (AI) - The Basics and Use Cases

1.4 Common Business Use Cases for AI

1.4.1 Services (5 mins): Chatbots, virtual assistants, automated support.

1.4.2 Marketing & Sales (5 mins): Personalized recommendations, lead generation, sentiment analysis.

1.4.3 Operations & Supply Chain (5 mins): Predictive maintenance, inventory optimization, logistics.

1.4.4 Finance & Accounting (5 mins): Fraud detection, risk assessment, automated reconciliation.

1.4.5 Human Resources (5 mins): Automated screening, personalized learning paths.

1.5 Exercise: Gemini and NotebookLM (10 mins):

Hands-on practice using Google's Gemini and NotebookLM to research a topic, extract key insights, and turn the findings into well-structured content.

Module 2: The AI Adoption Journey - Steps for Business Owners

ESSENTIAL MODULE

Suggested Duration: 77 mins

- This module provides a practical, step-by-step roadmap for business owners looking to implement AI. You'll learn to define clear business goals and identify opportunities where AI can make the biggest impact. The module guides you through assessing your company's data readiness, exploring different solution options (like "buy vs. build"), and developing a small pilot project to test the AI's value. The module concludes with a focus on scaling up your AI project and integrating it seamlessly with your existing systems and team.
- **Goal:** Provide a practical, step-by-step roadmap for implementing AI in a business.

Learning Objectives:

Upon completion of this module, business owners will be able to:

- Outline a structured, five-step process for initiating and deploying an AI project in their business.
- Explain the importance of defining clear business goals before exploring AI solutions.
- Assess their organization's data readiness for AI initiatives.
- Evaluate different AI solution acquisition strategies (build, buy, AIaaS, partner) based on business needs.
- Understand the value of starting with pilot projects and the importance of continuous monitoring.

Module 2: The AI Adoption Journey - Steps for Business Owners

2.1 Step 1: Define Clear Business Goals & Identify Opportunities

2.1.1 Problem-First Approach (5 mins): Don't adopt AI for AI's sake. What specific problems can AI solve?

2.1.2 Prioritize High-Impact Areas (5 mins): Start with small, manageable projects that can deliver measurable ROI.

2.1.3 Set SMART Goals (4 mins): Specific, Measurable, Achievable, Relevant, Time-bound.

2.2 Step 2: Assess Data Readiness

2.2.1 Data is Fuel (4 mins): AI needs data. Understand what data you have, where it is, and its quality.

2.2.2 Data Collection & Storage (5 mins): Identify necessary data, ensure ethical collection, and secure storage.

2.2.3 Data Quality & Governance (7 mins): Importance of clean, accurate, and consistent data.

Module 2: The AI Adoption Journey - Steps for Business Owners

2.3 Step 3: Explore AI Solutions - Build vs. Buy vs. Partner

2.3.1 Off-the-Shelf Solutions (4 mins): Ready-made AI tools (e.g., CRM with AI features, marketing automation platforms).

2.3.2 Custom Development (4 mins): Building AI solutions tailored to specific needs (often requires external expertise).

2.3.3 General Considerations (6 mins): Software, Hardware, Skills & Knowledge to unlock and maintain the value from AI Solutions.

2.3.4 AI-as-a-Service (AIaaS) (6 mins): Cloud-based AI services from providers (e.g., Google Cloud AI, AWS AI).

2.3.5 Partnering with Experts (4 mins): When to engage AI consultants or development firms.

Module 2: The AI Adoption Journey - Steps for Business Owners

2.4 Step 4: Develop a Pilot Project & Prototype

2.4.1 Start Small (3 mins): Test AI in a controlled environment to validate its value and learn.

2.4.2 Iterative Approach (3 mins): Implement, test, gather feedback, refine, and repeat.

2.4.3 Measure Performance (5 mins): Track KPIs to assess the pilot's success.

2.5 Step 5: Scale & Integrate

2.5.1 Integrate with Existing Systems (5 mins): Ensuring seamless flow of data and operations.

2.5.2 Employee Training & Change Management (5 mins): Educating and engaging staff, addressing concerns, and fostering adoption.

2.5.3 Continuous Monitoring & Improvement (4 mins): AI models need ongoing maintenance and refinement.

Module 3: Using AI Responsibly - Ethical & Governance Principles

Suggested Duration: 77 mins

- This module is designed to help you understand the important ethical considerations of using AI. It introduces core principles like fairness, transparency, and accountability, with clear examples to illustrate what each one means in a business context. You'll learn how to identify and mitigate common risks, such as algorithmic bias and data quality issues. The module also provides a simplified framework for setting up AI governance, helping you establish clear policies and responsibilities for using AI in your organization.
- **Goal:** Understand the ethical implications of AI and establish principles for responsible deployment.

Learning Objectives:

Upon completion of this module, business owners will be able to:

- Identify and explain the five core principles of responsible AI (fairness, transparency, accountability, privacy, human oversight).
- Recognize common ethical risks associated with AI (e.g., algorithmic bias, "black box" problems, misuse).
- Outline basic steps for establishing a simplified AI governance framework within their small to medium-sized business, including policy definition and oversight.
- Understand the importance of continuous monitoring for ethical adherence and risk mitigation.

Module 3: Using AI Responsibly - Ethical & Governance Principles

3.1 Core Principles of Responsible AI

3.1.1 Fairness & Non-Discrimination (6 mins): Ensuring AI systems do not perpetuate or amplify existing biases. *Example: Checking hiring AI for gender/racial bias.*

3.1.2 Transparency & Explainability (XAI) (6 mins): Understanding how AI makes decisions. *Example: Being able to explain why a loan application was approved or denied by AI.*

3.1.3 Accountability (4 mins): Clearly defining who is responsible for AI outcomes and potential errors. *Example: Establishing a protocol for human review of critical AI decisions.*

3.1.4 Privacy & Security (5 mins): Protecting sensitive data used by and generated from AI. *Example: Ensuring compliance with data protection regulations (e.g., GDPR, PDPA in Singapore).*

3.1.5 Human Oversight & Control (5 mins): Ensuring humans remain in the loop for critical decisions and can override AI. *Example: Not fully automating customer complaints without a human escalation path.*

Module 3: Using AI Responsibly - Ethical & Governance Principles

3.2 Identifying and Mitigating AI Risks

3.2.1 Algorithmic Bias (5 mins): How biases can enter AI systems through data or design. *Action: Regular auditing of data and model outputs.*

3.2.2 Data Quality & Integrity (5 mins): The impact of poor data on AI performance and ethics. *Action: Implementing robust data governance and cleansing processes.*

3.2.3 "Black Box" Problem (5 mins): Challenges in understanding complex AI models. *Action: Prioritizing explainable AI tools where transparency is critical.*

3.2.4 Misuse & Malicious Use (5 mins): Preventing AI from being used for harmful purposes. *Action: Establishing clear use policies and monitoring.*

3.2.5 Environmental Impact (6 mins): Considering the energy consumption of large AI models. *Action: Opting for energy-efficient solutions where possible.*

Module 3: Using AI Responsibly - Ethical & Governance Principles

3.3 Building an AI Governance Framework (Simplified for MSMEs)

3.3.1 Define AI Use Policies (5 mins): Clear guidelines for employees on acceptable AI tools and data usage. Guidelines should be tied back to the mission and values of the business, define why you are setting up the policies e.g. ensure that our customer's benefits come first. Where possible, previous use cases should be detailed and documented to be kept as a knowledge base, to inform on the AI use policies design.

3.3.2 Assign Ownership (4 mins): Designate individuals or teams responsible for AI strategy, risk, and compliance. Use a framework like RACI (Responsible, Accountable, Consulted, Informed) to clearly map out who is responsible for each part of the AI project lifecycle. With ownership comes accountability and action. Ownership needs to be clear with the roles and responsibilities that come with the ownership title.

3.3.3 Implement Review Processes (4 mins): Regular checks for ethical adherence, performance, and compliance. Consider setting up an AI Governance committee. The frequency of meetings for the committee is dependent on how much risk the business is willing to take, and the number of AI projects in the organization. A proper governance process needs to be set up to reduce the risk of conflict of interest. If resources are available, external auditors should be considered, and announced if appropriate to build trust.

Module 3: Using AI Responsibly - Ethical & Governance Principles

3.3 Building an AI Governance Framework (Simplified for MSMEs)

3.3.4 Stakeholder Engagement (3 mins): Involving employees, customers, and partners in discussions about AI's impact. This could be Internal Town Halls, Dedicated Intranet Channels, Customer Advisory Board, Customer Feedback Channels, Shared Knowledge Base with partners. Building a culture of collaboration, and cross-functional team that accept feedback from all stakeholders, be able to deliberate and act on constructive feedback.

3.3.5 Continuous Monitoring & Audit (4 mins): Regularly assessing AI systems for performance, fairness, and potential issues. Skills and knowledge will be needed to conduct well. How often should the audit be conducted, and how many resources are needed to conduct the audit well depends on the risk appetite of business. Again the audit processes needs to be set up properly with the necessary audit reminders, and reduce conflict of interest.

Module 4: Key Considerations & Framework for Successful AI Deployment

- The final module equips you with a framework to anticipate and handle the broader challenges of AI adoption. We will explore the evolving legal and regulatory landscape and its potential impact on your business. The module addresses how AI changes the workplace, with a focus on upskilling your team and managing the change effectively. You'll also learn how to measure the true return on investment (ROI) of your AI projects, considering both short-term and long-term benefits. Finally, the module provides guidance on future-proofing your business by staying updated on AI trends and fostering an AI-ready culture.
- **Goal:** Equip business owners with a framework to anticipate and mitigate broader risks associated with AI adoption.

Learning Objectives:

Upon completion of this module, business owners will be able to:

- Learn to anticipate and plan for challenges beyond technology, including the evolving legal landscape and a long-term vision for integrating AI into your core business strategy.
- Formulate strategies for effective change management, upskilling employees, and fostering an "AI-ready" organizational culture.
- Develop methods to measure both the tangible and intangible return on investment (ROI) of your AI initiatives.
- Identify and recognize the value of strategic partnerships to accelerate and optimize your AI adoption journey.
- Develop a mindset of continuous learning and adaptation to keep pace with emerging AI trends and maintain a competitive edge.

Module 4: Key Considerations & Framework for Successful AI Deployment

4.1 Legal & Regulatory Landscape

4.1.1 Emerging Regulations (4 mins): Awareness of evolving AI laws (e.g., EU AI Act, Singapore's Model AI Governance Framework).

4.1.2 Industry Standards & Best Practices (3 mins): Adhering to relevant guidelines for responsible AI.

4.1.3 Compliance & Audit Readiness (5 mins): Preparing for potential regulatory scrutiny. Documentation is important and provides some guidelines on doing good documentation.

4.2 Human-AI Collaboration & Workforce Impact

4.2.1 Upskilling & Reskilling (4 mins): Training employees to work alongside AI and adapt to new roles. State that the curation of the training content and trainer's background will be important.

4.2.2 Shifting Job Roles (4 mins): How AI can change existing job descriptions and create new opportunities. This needs employees to keep abreast of the latest changes in AI.

4.2.3 Change Management Strategies (5 mins): Effectively communicating AI adoption to employees and addressing concerns. Start with addressing the uncertainty of jobs possibly faced by the employees, moving to the detailed change transition to manage staff expectations.

Module 4: Key Considerations & Framework for Successful AI Deployment

4.3 Measuring Return on Investment (ROI) of AI

4.3.1 Quantifying Value (5 mins): Measuring both tangible (cost savings, revenue increase) and intangible benefits (customer satisfaction, employee morale). Good quality data is needed to enable measurement.

4.3.2 Long-term vs. Short-term Gains (3 mins): Understanding that some AI benefits may take time to materialize.

4.3.3 Continuous Evaluation (5 mins): Regularly assessing AI performance against business goals. Benchmarking will be important.

4.4 Future Proofing Your Business with AI

4.4.1 Staying Updated on AI Trends (4 mins): Importance of continuous learning and monitoring new developments.

4.4..2 Fostering an AI-Ready Culture (3 mins): Promoting innovation and embracing technological change. Important to increase the AI literacy level of the whole business organization to continuously extract value.

4.4.3 Strategic Partnerships (4 mins): Collaborating with AI experts and technology providers. How to select the good ones?

3

Optional Modules

Optional Modules

Module 5

Advanced Data
Management &
Governance for AI

Module 6

Building an AI-Ready
Culture & Workforce
Transformation

Module 7

AI Project Risk
Management &
Mitigation

Module 5: Advanced Data Management & Governance for AI

OPTIONAL MODULE

Suggested Duration: 67 mins

- This module provides a deeper dive into the importance of high-quality data for AI success. It is crucial for businesses that want to move beyond basic AI applications and build more sophisticated, data-driven solutions.
- **Goal:** Provide a deeper dive into the practical aspects of managing and governing data to optimize AI performance and ensure compliance.

Learning Objectives:

Upon completion of this module, business owners will be able to:

- Describe the full data lifecycle in the context of AI (acquisition, storage, transformation, versioning) and identify key considerations at each stage for optimal AI performance.
- Develop a more robust understanding of data governance principles (ownership, quality, security, compliance) and their direct impact on AI project success and ethical adherence.
- Evaluate common data management challenges (e.g., data silos, quality issues) and propose strategic solutions relevant to their business.
- Recognize the critical importance of specific data privacy regulations like Singapore's PDPA and, if applicable, GDPR, in managing data for AI initiatives.

Module 5: Advanced Data Management & Governance for AI

OPTIONAL MODULE

5.1 Data Lifecycle Management for AI

5.1.1 Data Acquisition & Ingestion (8 mins): Strategies for collecting relevant data from various sources (internal, external, third-party APIs).

5.1.2 Data Storage & Infrastructure (8 mins): Overview of scalable storage solutions (cloud data lakes, data warehouses) suitable for AI workloads.

5.1.3 Data Transformation & Preparation (8 mins): Techniques for cleaning, normalizing, and preparing data for AI model training (e.g., handling missing values, outliers).

5.1.4 Data Versioning & Lineage (5 mins): Importance of tracking data changes and understanding data origin for reproducibility and auditing.

Module 5: Advanced Data Management & Governance for AI

OPTIONAL MODULE

5.2 Robust Data Governance Frameworks for AI

5.2.1 Data Ownership & Stewardship (5 mins): Clearly defining roles and responsibilities for data assets.

5.2.2 Data Quality Management (5 mins): Implementing processes and tools to ensure data accuracy, consistency, and completeness.

5.2.3 Data Security & Access Control (5 mins): Best practices for protecting sensitive data from unauthorized access and cyber threats.

5.2.4 Compliance & Regulatory Landscape (Deep Dive) (8 mins): Understanding specific data privacy laws (e.g., PDPA in Singapore, GDPR if applicable internationally) and their implications for AI data.

5.2.5 Data Archiving & Retention Policies (5 mins): Managing data throughout its lifecycle for compliance and efficiency.

Module 5: Advanced Data Management & Governance for AI

OPTIONAL MODULE

5.3 Tools and Technologies for Data Management:

5.3.1 Overview of Data Platforms (5 mins): Introduction to common cloud data services (e.g., AWS S3/Glue, Azure Data Lake/Synapse, Google Cloud Storage/BigQuery).

5.3.2 Data Governance Tools (5 mins): Brief mention of platforms that aid in data cataloging, quality monitoring, and access management.

Module 6: Building an AI-Ready Culture & Workforce Transformation

OPTIONAL MODULE

Suggested Duration: 56 mins

- This module addresses the human side of AI adoption. It is important for business owners to learn how to prepare their team for AI implementation, manage change effectively, and create a culture that embraces new technology.
- **Goal:** Focus on the human element of AI adoption, emphasizing cultural shifts, skill development, and effective change management.

Learning Objectives:

Upon completion of this module, business owners will be able to:

- Formulate strategies for cultivating an organizational culture that embraces AI, encourages experimentation, and fosters continuous learning.
- Analyze the potential impact of AI on their workforce (job augmentation, new roles) and develop a preliminary plan for upskilling and reskilling employees.
- Implement effective change management techniques to ensure smooth AI adoption, address employee concerns, and minimize resistance within the organization.
- Understand the critical role of human-AI collaboration and maintaining human oversight in maximizing the benefits and ethical deployment of AI.

Module 6: Building an AI-Ready Culture & Workforce Transformation

6.1 Cultivating an AI-First Mindset

6.1.1 Leadership Buy-in & Vision (5 mins): How leaders can champion AI and communicate its strategic importance. Leadership is important to establish culture and increase momentum in AI adoption.

6.1.2 Promoting Experimentation & Learning (5 mins): Encouraging a safe environment for AI pilots and continuous improvement. This is especially important since using AI is all about iterative learning and experimentation.

6.1.3 Data Literacy Across the Organization (5 mins): Empowering all employees with basic data understanding and interpretation skills, to know how data works which is the precursor to AI literacy.

Module 6: Building an AI-Ready Culture & Workforce Transformation

6.2 Workforce Planning & Skill Development

6.2.1 Identifying AI's Impact on Roles (6 mins): Analyzing how AI will augment, change, or create new job functions within the business.

6.2.2 Upskilling & Reskilling Programs (5 mins): Strategies for training current employees in AI-related skills (e.g., data analysis, AI tool usage, prompt engineering).

6.2.3 Attracting & Retaining AI Talent (5 mins): Understanding the market for AI professionals and strategies for hiring.

6.2.4 Human-in-the-Loop Design (6 mins): Emphasizing the continuous need for human oversight and collaboration with AI systems.

Module 6: Building an AI-Ready Culture & Workforce Transformation

6.3 Effective Change Management for AI Adoption

6.3.1 Communication Strategies (5 mins): Clearly articulating the "why" and "how" of AI adoption to mitigate fear and build excitement. Manage the uncertainty then followed by what are the benefits to look out for.

6.3.2 Addressing Employee Concerns (5 mins): Proactively tackling fears about job displacement and ensuring a just transition.

6.3.3 Creating AI Champions (4 mins): Identifying and empowering internal advocates for AI within the organization. Showcase those who have benefitted much from the organization's adoption of AI.

6.3.4 Feedback Mechanisms (5 mins): Establishing channels for employees to provide input and contribute to AI development. Show that the feedback matters and acted upon.

Module 7: AI Project Risk Management & Mitigation

OPTIONAL MODULE

Suggested Duration: 75 mins

- This module offers an advanced look at identifying and managing the specific risks associated with AI projects. It is essential for business owners who want to minimize potential pitfalls and ensure their AI investments are secure and successful.
- **Goal:** Equip business owners with the knowledge and tools to identify, assess, and proactively mitigate common risks throughout the AI project lifecycle.

Learning Objectives:

Upon completion of this module, business owners will be able to:

- Categorize and explain the various types of risks specific to AI projects, including technical, operational, financial, ethical, reputational, and security risks.
- Apply basic methods for identifying, assessing (likelihood and impact), and prioritizing potential AI project risks within their specific business context.
- Identify and propose practical strategies to mitigate common AI risks across the entire AI project lifecycle, from initial planning to post-deployment.
- Understand the importance of proactive planning, iterative development, robust data quality controls, human oversight, and continuous monitoring in reducing AI project risks.
- Recognize the role of Explainable AI (XAI) and strong cybersecurity practices in enhancing risk mitigation efforts for AI systems.

Module 7: AI Project Risk Management & Mitigation

OPTIONAL MODULE

7.1 Understanding AI-Specific Risks

7.1.1 Technical Risks (8 mins): Model accuracy issues, scalability challenges, integration complexities with existing systems, data drift (model performance degradation over time).

7.1.2 Operational Risks (5 mins): Unexpected workflow disruptions, maintenance overheads, system downtime, lack of clear ownership for AI outputs.

7.1.3 Financial Risks (5 mins): Underestimated costs (data prep, infrastructure, ongoing maintenance), lower-than-expected ROI, failure to secure funding.

7.1.4 Ethical & Reputational Risks (Deeper Dive) (5 mins): Beyond basic awareness, understanding the mechanisms of bias, privacy breaches, and lack of transparency leading to real-world harm or public backlash.

7.1.5 Security Risks (5 mins): Vulnerabilities in AI models, adversarial attacks (manipulating AI inputs), data poisoning, and risks to intellectual property within AI systems.

Module 7: AI Project Risk Management & Mitigation

OPTIONAL MODULE

7.2 AI Risk Assessment & Prioritization

7.2.1 Identifying Potential Pitfalls (6 mins): Techniques for brainstorming and documenting risks at each phase of an AI project (from ideation to deployment).

7.2.2 Quantifying Risk (4 mins): Simple methods for assessing likelihood and impact of identified risks. Use past data or similar lessons wherever possible, depending on the maturity of the documentation process.

7.2.3 Prioritizing Risks (3 mins): Focusing on high-impact, high-likelihood risks first.

Module 7: AI Project Risk Management & Mitigation

OPTIONAL MODULE

7.3 Strategies for AI Risk Mitigation

7.3.1 Proactive Planning & Due Diligence (5 mins): Thorough vendor evaluation, realistic goal setting, and comprehensive resource allocation.

7.3.2 Robust Data Governance & Quality Control (4 mins): Implementing measures to ensure data integrity and prevent bias (e.g., data audits, diverse datasets).

7.3.3 Iterative Development & Testing (4 mins): Agile approaches, continuous testing (including adversarial testing), and pilot programs to identify issues early.

7.3.4 Explainable AI (XAI) Adoption (5 mins): Where relevant, choosing or designing AI solutions that provide transparency into their decision-making process. Document the lessons learnt, or the decision made during the AI project execution.

7.3.5 Human Oversight & Intervention (3 mins): Designing systems that allow for human review, override, and intervention, especially for critical decisions.

7.3.6 Continuous Monitoring & Post-Deployment Audits (3 mins): Setting up systems to track AI model performance, detect anomalies, and identify new risks post-launch.

7.3.7 Cybersecurity Best Practices for AI (4 mins): Securing AI infrastructure, models, and data against cyber threats. Make sure the prompts do not contain any sensitive information of individuals and organizations.

Module 7: AI Project Risk Management & Mitigation

OPTIONAL MODULE

7.4 Learning from Failure & Adapting

7.4.1 Post-Mortem Analysis (3 mins): Conducting reviews of AI projects that didn't meet expectations to identify lessons learned.

7.4.2 Agility & Flexibility (3 mins): Building an organizational capacity to adapt AI strategies based on new information and evolving risks.

- Module 2 - AI Tools Directory
- Module 2 /4- ROI Calculator - AI Success Blueprint User Guide
- Module 1 - Exercise - Google Gemini & NotebookLM

2.1 Case Studies

Sector		Case Studies
1	Energy	• Digital Twin for Grid Management at Tenaga Nasional Berhad (TNB), Malaysia • AI for Renewable Energy Forecasting at National Grid Corporation (NGCP), Philippines • AI-Driven Building Management System (BMS) at Marina One, Singapore • Power Grid Management • Oil and Gas Pipeline Integrity • Renewable Energy Optimization
2	Minerals	• AI-powered Mine Operations at BHP, and its BMA Joint Venture in Queensland • AI for Fatigue Detection at BHP • US Steel Boosts Maintenance Efficiency with Generative AI • Mineral Exploration and Discovery • Predictive Maintenance and Fleet Management • Mine Safety and Hazard Monitoring

2.1 Case Studies

Sector		Case Studies
3	Food, Agriculture and Forestry	• Monsoon Prediction for Indian Farmers • SeeTree: Per-Tree Monitoring for Growers and Forest Managers • Forest-Risk Commodity Sourcing with Google Earth Engine • AI Forecasting to Cut Food Waste at Coop • Community Forest Monitoring in the Peruvian Amazon • Smart Rice-Farm Water Management in Thailand • Smart Plant Doctor • Smart Health Monitoring for Chicken and Pig Farms • Smart Money Planner • Smart Food Waste Reduction and Inventory Management • Intelligent Customer Service and Order Management • Dynamic Menu Optimization and Pricing • Creative Menu and Marketing Design with Generative AI
4	Digital	• Gojek's AI-Powered Platform, Indonesia • TIM (Telecom Italia)'s AI-Driven Network & Service Operations • Telefónica (Global ICT & Digital Services) – AI for Security and Customer Analytics • Find Your Best Customers, Faster • Predicting the Future of Your Business

2.1 Case Studies

Sector		Case Studies
5	E-commerce	- Shopee's Personalized Recommendation Engine, Singapore - Stitch Fix – AI for Fashion Design and Inventory - JD.com – Smart Logistics and Demand Forecasting - L’Oréal – AI-Powered Skin Diagnostics & Virtual Try-Ons - Smart Product Recommendations - Smart Inventory Management - Smart Pricing - AI Customer Service
6	Tourism	- Changi Airport's AI-powered Passenger Flow Management and Security Check, Singapore - Expedia’s Role in Advancing Quality Tourism in Southeast Asia - AirAsia – AI-Driven Dynamic Pricing and Demand Forecasting, Malaysia - AI-Driven Predictive Maintenance for Urban Public Transport - AI-Enhanced Customer Support for a Global Hospitality Chain

2.1 Case Studies

Sector		Case Studies
7	Science and Technology	• Grab's AI for Safety and Fraud Detection, Singapore • University Research Teams Using Google’s AI Co-Scientist • Clinicians and Medical Researchers Using Vertex AI Search for Healthcare • Real-Time Coral Reef Monitoring • Accelerating New Material Discovery
8	Transport	• Tuas Port’s AI-driven Logistic Hub, Singapore • Yamato Transport — Last-Mile Delivery Optimization, Japan • Penske Truck Leasing — Predictive Maintenance & Fleet Efficiency • DHL — Route Planning & Last-Mile Delivery Optimization • Smart Warehouse Inventory Management • Intelligent Delivery Route Planning • Predictive Equipment Maintenance

2.1 Case Studies

Sector		Case Studies
9	Standard and Conformance	• AI for Quality Control and Inspection at Flex, Malaysia • Network Rail — Safety-Critical Communication (SCC) Auditing, UK • AES — Scaling Safety / Health Audits with GenAI Agents • Automotive Manufacturer — AI in Quality Management / Conformance Checking • Robotic Optimisation of Powdered Beverages (Food & Beverage)
10	Services	• AIA's AI-Powered Customer Service Chatbot, Singapore • DBS and AI in Banking, Singapore • Discover Financial Services — Generative AI for Customer Care • Answering Common Questions Instantly with a Chatbot • Sorting and Prioritizing Customer Emails • Creating a 24/7 Virtual Assistant on WhatsApp • Getting Customer Feedback Automatically
11	Manufacturing	• Siemens — Smart Factory Quality Control • BMW — AI-Driven Visual Quality Inspection • Foxconn — Digital Twins & AI-Powered Quality Inspection • Smart Maintenance Scheduling Using Existing Data • Intelligent Production Planning and Scheduling • Quality Control Data Analysis and Root Cause Detection • Automated Documentation and Compliance Reporting

2.1 Case Studies

Use Case: AI-Driven Building Management System (BMS) at Marina One, Singapore

✧ How AI Helps

Marina One has deployed an advanced, **AI-driven BMS** that integrates with a network of IoT sensors throughout the building. The AI analyzes real-time data on occupancy, temperature, humidity, and CO₂ levels within different zones. Based on this data, the system's machine learning algorithms **autonomously adjust climate control and lighting** to optimize for both occupant comfort and energy efficiency. For example, it can dynamically reduce cooling in unoccupied areas or dim lights in conference rooms when CO₂ levels indicate no one is present.

🚩 The Problem

Large-scale commercial developments, like Marina One, face the dual challenge of high energy consumption and the need to meet strict sustainability standards, such as Singapore's Green Mark. Inefficient and static building management systems (BMS) lead to significant energy waste, particularly from HVAC and lighting, which are major operational costs.

Source: [Venturous Group](#), [Cyrill \(Pexels\)](#)

🔄 Business Impact

The AI-driven system has enabled Marina One to achieve substantial, quantifiable energy savings. The building's energy performance is up to **35% more efficient** than that of a typical commercial building. This not only significantly reduces operational costs but also helps the development achieve its sustainability goals and maintain its prestigious Green Mark Platinum certification, enhancing its market value and tenant appeal.

2.1 Case Studies

Use Case: Power Grid Management

The Problem

The power grid faces significant challenges with the integration of intermittent renewable energy sources like wind and solar.

Traditional, static grid management systems struggle to handle the variable supply and demand, leading to inefficiencies, potential blackouts, and grid instability. A key issue is accurately forecasting energy production from renewables and balancing it with real-time consumer demand.

How AI Helps

AI-powered systems, often referred to as "smart grids," use machine learning algorithms to analyze vast amounts of data from IoT sensors, smart meters, and weather forecasts. These models can accurately **predict energy supply** from renewable sources and forecast demand across different regions and times. The AI then dynamically **adjusts power distribution and manages energy storage systems**, such as large-scale batteries, to maintain a stable balance between supply and demand in real-time.

Business Impact

This translates to greater grid stability and reliability, reducing the risk of blackouts. It also enables the efficient integration of more renewable energy, helping utilities meet clean energy goals while minimizing the need for costly, on-standby fossil fuel plants. By optimizing energy distribution and reducing waste, AI leads to lower operational costs and improved energy efficiency.

2.2 Templates

Example:

AI Prompt Design Worksheet

Purpose: Help you craft effective AI prompts for accurate, relevant, and actionable results.

Step 1: Define the Purpose

What do you want AI to help you achieve? Be specific.

Example: "Generate a marketing content plan for a small bakery."

Purpose	Notes

Step 2: Define the Role

What perspective or expertise should AI take on?

Example: "Act as a social media marketing expert for small businesses."

Role	Notes

Step 3: Provide Instructions

What exactly should AI do? Include steps, context, or rules.

Example: "List 5 creative post ideas, including captions, hashtags, and suggested posting times."

Which subtopics can you refer these resources to (suggestion)?

- 1.2.5 Generative AI (GenAI) (5 mins): AI that creates new content (text, images, audio, code).
- 1.4 Common Business Use Cases for AI

Note: Can be given as an AI prompting exercise.

Example:

Analysing Brand Identity Prompts

A strong brand identity is more than just a logo or a catchy slogan—it is the complete impression your business leaves on customers every time they interact with you. For many MSMEs, building and maintaining that identity can feel overwhelming, especially when you're managing multiple priorities.

Whether you are just starting, refining your image, or expanding into new markets, these prompts will help you uncover what makes your brand unique, connect more deeply with your audience, and stand out in a crowded marketplace.

50 Beginner-Friendly Analysing Brand Identity Prompts (with Tips)

- Prompt:** Act as a brand strategist and list the top decisions I must make to create a strong, memorable brand for my business.
Tip: Start with your mission, target audience, and 2–3 values you want your brand to stand for.
- Prompt:** Act as a marketing coach and help me write a one-sentence elevator pitch that clearly explains what makes my business special.
Tip: Write a one-sentence "elevator pitch" in plain language anyone can understand.
- Prompt:** As a brand designer, outline the steps I should take to choose colours, fonts, and a logo style that people will remember.
Tip: Pick colours and fonts that match your brand's personality, and keep designs simple.
- Prompt:** Act as a social media consultant and give me a plan to use online marketing to grow brand awareness for my business.
Tip: Post helpful, engaging content regularly on the platforms your customers use most.
- Prompt:** Act as a copywriting expert and create a simple brand tone guide so my website, social media, and materials sound consistent.
Tip: Create a short "tone guide" with words, phrases, and style you want to use consistently.
- Prompt:** Act as a storytelling coach and help me write my business story so it connects emotionally with my audience.

Categories of Prompts:

- Analysing Brand Identity Prompts
- Analysing Market Trend Prompts
- Analysing Product-Market Fit Prompts
- Content Marketing Campaign Prompts
- Sales Performance Analysis Prompts
- Customer Service Management Prompts
- Financial Management Prompts
- Software Development Prompts

2.2 Templates

Example:

Checklist: Is Your Business Case Suitable for AI?

Use this checklist to help you evaluate if a specific business problem or opportunity is a good candidate for an AI solution.

There is a use case if you answer "Yes" to at least 12 out of the 14 questions. Tick them off if it's a "Yes".

1. Problem & Goal Definition

- ☐ Do you have a clearly defined problem that AI would solve, and is it a high-priority business challenge?
- ☐ Can you articulate a specific, measurable goal for the AI project (e.g., reduce customer support calls by 20%, increase sales leads by 10%)?
- ☐ Is the problem repetitive, or does it involve analyzing large amounts of data that would be difficult for a human to process?

Tips:

- **Quantify the Problem:** Do not just state a problem; quantify it with specific metrics. Instead of saying "our customer support is slow," state "our average customer support ticket resolution time is 48 hours, costing us an estimated \$X per month in labor." This gives you a clear baseline to measure against.
- **Define a Specific, Measurable Goal:** Establish a **SMART** (Specific, Measurable, Attainable, Relevant, and Time-bound) goal for the project. For example, your goal should be "to reduce customer support ticket resolution time by 25% within six months using an AI chatbot." This provides a clear target and a timeline.
- **Identify the AI Output:** Be precise about what you need the AI to do. Is it a prediction (e.g., predicting customer churn), a classification (e.g., sorting customer emails), or a generation (e.g., creating product descriptions)? This helps in scoping the project and selecting the right model type.

2. Data Readiness

- ☐ Do you have access to a sufficient amount of relevant data (e.g., historical sales, customer feedback, operational logs)?
- ☐ Is the data in a structured, consistent format, or can it be easily organized?
- ☐ Is the data high-quality, reliable, and free from significant bias?
- ☐ Can the current data answer the problem or solve the challenge?

Which subtopics can you refer these resources to (suggestion)?

- 1.4 Common Business Use Cases for AI

Note: It can also be given at the end of the module.

Go through the list of 14 questions. It is a use case if you answer "Yes" to at least **12 out of 14** questions.

Some explanation for each question.

Objective: Should you implement such AI solution?

Alternative: Emphasise on the use of ROI Calculator (to be explained later) to make similar decision.

You may adjust:

1. The number of "Yes" or "tick" for it to be considered a suitable AI use case
2. Localise the example of e.g. data according to local context e.g. what's high quality data in your market?

2.2 Templates

Example:

Step-by-Step Guide: The AI Adoption Journey for Business Owners

This guide expands on the five key steps of the AI Adoption Journey to help you navigate the process successfully.

Step 1: Define Clear Business Goals & Identify Opportunities

- **Identify a Specific Problem:** Start with a business pain point or a specific opportunity, not with the technology itself. Ask: "What problem do we need to solve?" or "Where can we find a competitive advantage?"
- **Set Realistic & Measurable Goals:** Define what success looks like. Instead of "we want to use AI," set a goal like "we want to reduce product returns by 15% by using AI to analyze customer feedback." Use past data to estimate realistic but stretched goals.
- **Prioritize Opportunities:** Not all problems are created equal. Focus on areas where AI can deliver the most significant impact on your business's bottom line or customer satisfaction. Start with opportunities that can impact KPIs the most.
- **Estimate Return on Investment:** Before committing resources, use the [ROI Calculator](#) to project potential costs and benefits. This helps compare initiatives objectively and make informed, numbers-driven decisions.

Step 2: Assess Your Data Readiness

- **Audit Your Data:** Take stock of the data you currently collect and store. This includes customer information, sales records, operational data, and marketing analytics. Get that data inventory list up.
- **Evaluate Data Quality:** AI models are only as good as the data they're trained on. Check for data completeness, accuracy, and consistency. Check for IDs of entities and transactions to ensure consistency. Clean and prepare your data for use.
- **Ensure Data Accessibility:** Make sure you can easily access and use the data you need. Data silos can be a major roadblock to AI adoption, keeping in mind privacy and security. Data integrity is important too.

It is critically important to measure data quality because poor-quality data can directly lead to flawed calculations and erroneous outputs from a machine learning model.

Which subtopics can you refer these resources to (suggestion)?

- All

Note: It can be served as content for the curriculum or a reading material for MSMEs.

5 Steps:

1. Define Clear Business Goals & Identify Opportunities
2. Assess Your Data Readiness
3. Explore AI Solutions: Build vs. Buy vs. Partner
4. Develop a Pilot Project & Prototype
5. Scale & Integrate

2.3 Tools

Example:

Which subtopics can you refer these resources to (suggestion)?

- 2.3 Step 3: Explore AI Solutions - Build vs. Buy vs. Partner
 - 2.3.1 Off-the-Shelf Solutions (4 mins): Ready-made AI tools (e.g., CRM with AI features, marketing automation platforms). What are the advantages and disadvantages of buying off-the-shelf?

Note: Please send the official Google Link as we are expecting updates on the excel sheet with new AI tools.

GOOGLE AI FEATURES								
SN	FEATURE	PRODUCT	SUBCATEGORY	DESCRIPTION	WEBSITE	PRICING MODEL	HQ LOCATION	REMARKS
1	Gemini	Gemini	Workspace & Productivity / Core AI	Google's AI assistant for search and productivity	Link	Freemium	USA	
2	AI Mode in Search	Google Search	Workspace & Productivity	Transforms search into dynamic conversational experience,	Link	Freemium		
3	AI Overviews in Search	Google Search	Workspace & Productivity	Auto-generated summaries for search queries	Link	Freemium		
4	Google Vids	Google Workspace	Workspace & Productivity	AI-powered video creation (work/training focused), integrated with Workspace via Gemini	Link	Paid		
5	NotebookLM	NotebookLM	Workspace & Productivity	AI research assistant for document summaries and audio overviews, part of AI Premium	Link	Freemium		
6	Google AI Studio	Google AI Studio	Workspace & Productivity	Web-based IDE for prototyping with Gemini and other models; supports multimodal prompts	Link	Freemium		
7	Google Labs	Google Labs	Experiments	Experimental hub featuring AI apps like Flow, Doppl, Project Mariner, Whisk, and UI prototyping tools	Link	Freemium		
8	Vertex AI	Google Cloud	Developer Platforms	End-to-end AI platform on Google Cloud for building, deploying, and managing ML models	Link	Paid		Free \$300 in credits for new customers to try Vertex AI or other Google Cloud products
9	Vertex AI Studio / Agent Builder / Search	Google Cloud	Developer Platforms	AI Studio / Agent Builder / Search — Visual model prototyping, multi-agent systems, and AI-powered search experiences	Link	Paid

- 3.3 Building an AI Governance Framework (Simplified for MSMEs)

2.2 Templates

Example:

Step-by-Step Guide: Building Your AI Governance Framework

A governance framework doesn't have to be complex. For a business owner, it's about establishing clear, simple rules to ensure your use of AI is transparent, fair, and trustworthy.

Step 1: Define Your Core Principles & Policies

Start by creating a simple "AI Bill of Rights" for your business. Align it with your company's existing values and ethical guidelines.

[] **List your non-negotiables:** What are the absolute rules for using AI? For example: "We will not use AI to make critical hiring decisions without human review," or "All customer data used in AI must be anonymized."

[] **Establish a Policy on AI Tools:** Create a clear policy for your employees about which AI tools are approved for use and which are not. This helps prevent "shadow AI," where employees use unapproved tools that could pose security or compliance risks. A dedicated [privacy policy](#) outlining how data is collected, used, and protected on your website will also help build trust and ensure compliance.

Other remarks:

Step 2: Assign Clear Roles and Accountability

An AI governance framework is only effective if someone is responsible for it.

[] **Designate an "AI Champion":** This doesn't have to be a tech expert. It can be a manager or team leader who is enthusiastic about AI and responsible for overseeing its ethical use.

Objective: MSMEs can run through the steps to build their AI Governance Framework.

4 Steps:

1. Step 1: Define Your Core Principles & Policies
2. Step 2: Assign Clear Roles and Accountability
3. Step 3: Implement a Simple Risk Assessment Process
4. Step 4: Engage Stakeholders & Ensure Transparency
5. Step 5: Continuously Monitor & Audit

2.2 Templates

Example:

AI Use Case Risk Scorecard

Use Case Title: [Insert Title of AI Project/Use Case]
Department/Team: [Insert Department Name]
Date: [Insert Date]
Overall Risk Level: (Circle One) Low / Medium / High

Instructions: Rate each risk factor from 1 (Low Risk) to 5 (High Risk). Total the scores to determine the overall risk level.

1. Data & Privacy Risks

Factor	Description	Score (1-5)
Data Sensitivity	How sensitive is the data used (e.g., personally identifiable information, financial data, health records)?	
Data Source & Consent	Is the data legally sourced, and is there clear consent for its use?	
Data Volume & Storage	The volume of data and the security of its storage and transit.	
Bias & Fairness	Is the training data free from biases that could lead to discriminatory outcomes?	
Transparency	How easily can the data sources and collection methods be explained?	
Subtotal		

2. Technical & Performance Risks

Factor	Description	Score (1-5)
Model Accuracy	What is the impact if the model makes a mistake? (e.g., minor inconvenience vs. safety risk).	
Explainability	How easy is it to understand how the model arrived at its decision?	
System Reliability	What is the impact of system downtime or failure?	
Security Vulnerabilities	Is the model or system susceptible to adversarial	

Disclaimer: This template/sample is for general informational purposes only and does not constitute legal advice. Companies should carefully review and tailor it to their specific circumstances, industry requirements, and applicable laws. Use of this material is at your own risk, and you are strongly encouraged to seek advice from a qualified legal professional.

Which subtopics can you refer these resources to (suggestion)?

- A sample highlighted in the “Step By Step Guide to AI Governance Framework” document
- 3.2 Identifying and Mitigating AI Risks

4 Categories of Risks:

- Data & Privacy Risks
- Technical & Performance Risks
- Business & Operational Risks
- Total Score & Risk Interpretation

How to analyse?

Total Score: [Sum of all subtotals]

Risk Bands:

- Low Risk (Score 15-35):** Proceed with standard review and implementation.
- Medium Risk (Score 36-55):** Requires detailed review by the governance committee and may need risk mitigation strategies before proceeding.
- High Risk (Score 56-75):** Requires a comprehensive risk assessment, formal approval, and a clear mitigation plan. The committee may recommend against implementation.

You may adjust:

- The criteria for the risk band

Generic Privacy and Data Usage Policy Sample

[Your Company Name] Privacy Policy

Last updated: [Date]

1. Introduction

[Your Company Name] ("we," "our," or "us") is committed to protecting the privacy of your personal data. This policy explains how we collect, use, and protect your information when you interact with us, including through our website, services, and products. We encourage you to read this policy carefully to understand our practices regarding your data.

2. What Information We Collect

We may collect various types of personal information, depending on how you interact with our business. This can include:

- Contact Information: Name, email address, phone number, and mailing address.
- Payment Information: Details required for processing payments, such as credit card numbers or other financial information, which are typically handled by a third-party payment processor.
- Usage Data: Information about how you use our website or services, such as your IP address, browser type, pages visited, and time spent on our site.
- Other Information: Any other information you voluntarily provide to us, such as in customer service inquiries, surveys, or feedback forms.

3. How We Use Your Information

We use the information we collect for the following purposes:

- To provide and operate our products and services.
- To process transactions and send you related information, including invoices and confirmations.
- To communicate with you, respond to your inquiries, and provide customer support.
- To improve our website, products, and services by analyzing user behavior and preferences.
- To send you marketing and promotional communications, if you have opted in to receive them.
- To comply with legal obligations and protect against fraudulent activity.

4. How We Protect Your Data

We take reasonable and appropriate security measures to protect your personal information from unauthorized access, alteration, disclosure, or destruction. These measures may include:

- Using secure servers and data storage.
- Implementing data encryption where appropriate.

Disclaimer: This template/sample is provided for general informational purposes only and does not constitute legal advice. Companies should review and modify it to fit their specific circumstances and applicable laws. Use of this material is at your own risk, and you should consult a qualified professional for legal guidance.

Which subtopics can you refer these resources to (suggestion)?

- A sample highlighted in the “Step By Step Guide to AI Governance Framework” document
- 3.3 Building an AI Governance Framework (Simplified for MSMEs)
 - 3.3.1 Define AI Use Policies (5 mins)

Objective: MSMEs can edit accordingly to their needs. This is a generic privacy data usage policy sample that can be used as a Privacy Policy on website.

Components included in the sample:

1. Introduction
2. What Information We Collect
3. How We Use Your Information
4. How We Protect Your Data
5. Sharing Your Information with Third Parties
6. Your Rights
7. Cookies and Tracking Technologies
8. Changes to This Policy
9. Contact Us

Checklist: How to Reduce Bias in Your Data

Reducing bias in data is a continuous process, not a one-time fix. Use this checklist as a practical guide to identify and mitigate bias at every stage of your AI adoption journey. **Note that this list is a starting point and not meant to be exhaustive.**

Before You Collect Data

- [] **Define Your Problem Clearly:** Before gathering any data, ensure you have a precise and well-defined problem you want to solve. Ambiguous goals can lead to biased data collection.
- [] **Form a Diverse Team:** Involve a diverse group of people (in terms of gender, age, background, and experience) in the planning stage. Different perspectives are crucial for spotting potential biases you may not be aware of.
- [] **Identify Potential Sources of Bias:** Brainstorm where bias might creep into your data. Are you only collecting data from your most loyal customers? Are you relying on historical data that reflects past societal prejudices?

Other remarks:

During Data Collection

- [] **Ensure Data Represents Your Target Population:** Your data should be a fair reflection of the people your AI will affect. If your customer base is diverse, but your data is mostly from one demographic, you have a representation bias.
- [] **Check for Incomplete or Missing Data:** Understand why data might be missing. If certain demographic groups consistently have more missing data, it can skew your results. Don't just ignore it; investigate the cause.
- [] **Use Multiple Data Sources:** Relying on a single source of data can amplify its inherent biases. Use a variety of data sources to get a more complete picture.

Other remarks:

Which subtopics can you refer these resources to (suggestion)?

- 3.1 Core Principles of Responsible AI

Objective: MSMEs can use this checklist as a guide to identify and mitigate bias at every stage of AI adoption journey.

4 Stages

1. Before you collect data
2. During data collection
3. After you have collected your data
4. As you use the AI model

2.2 Templates

Example:

Framework for Successful Enterprise AI Deployment

This framework is designed for business owners to navigate the key considerations of deploying an AI solution. It is a practical guide to ensure your AI project is not only technically successful but also legally compliant, well-integrated with your team, and financially worthwhile.

Step 1: Legal & Regulatory Compliance Check

Before you press "go" on any AI project, it is critical to understand the legal landscape. Failing to do so can lead to reputational damage, customer loss, and costly legal issues. This step is about aligning your AI use with the law and your business's core values.

Guiding Questions:

1. **Data Privacy:** What type of data will my AI solution use? Does it involve personal or sensitive information (e.g., customer names, financial details, health data)? Do I have the necessary consent to use this data, and does the AI tool comply with regulations like GDPR (General Data Protection Regulation) or CCPA (California Consumer Privacy Act)?
2. **Intellectual Property (IP):** If I am using a generative AI tool (e.g., for creating marketing copy or images), who owns the content it produces? Have I read the terms of service to understand if I can legally use this content for commercial purposes without risking copyright infringement?
3. **Existing Regulations:** Are there any industry-specific regulations (e.g., in finance, healthcare, or human resources) that dictate how AI can be used? Have I verified that my chosen AI solution meets these standards?

Step 2: Human-AI Collaboration and Workforce Planning

AI is a tool to augment your team, not replace it. A successful deployment hinges on a smooth transition for your employees and a clear understanding of how their roles will evolve.

Guiding Questions:

1. **Role Redesign:** What tasks will this AI tool automate? How can I redesign the affected job roles to focus on higher-value, human-centric skills like strategy, creativity, and customer relationship management?
2. **Training & Upskilling:** What new skills will my team need to work effectively with this AI tool? What is my plan for providing training, and how can I make it an engaging and positive experience rather than a burden?
3. **Change Management:** How will I communicate the "why" behind this AI

Which subtopics can you refer these resources to (suggestion)?

- All

Objective: These guiding questions support LIPs in helping MSMEs plan for AI adoption. It can also serve as a checklist for MSMEs.

4 Steps

1. Step 1: Legal & Regulatory Compliance Check
2. Step 2: Human-AI Collaboration and Workforce Planning
3. Step 3: Measuring Return on Investment (ROI)
4. Step 4: Data Governance and Management at Scale
5. Step 5: AI Model Governance and Organizational Learning

2.4 Market Overview Report

Which subtopics can you refer these resources to (suggestion)?

- 4.1 Legal & Regulatory Landscape
- 4.4 Future Proofing Your Business with AI

Objective: The market overview report provides key insights to help LIPs understand the market context and incorporate relevant information into their training.

The report is arranged according to the 10 member states and includes the information outlined below:

1. Geographic & Demographic Snapshot
2. Business Landscape & Digital Economy
3. Key Strengths & Gaps
4. Social Media & Digital Tools Usage
5. Technology & AI Maturity
6. National; AI Strategy

5

Implementation Guidance

Suggestions to Local Implementers (Modes of Content Delivery)

1. Short, Practical Sessions (30–60 Minutes Per Session)

Each session is designed to be bite-sized and laser-focused on a specific business problem or task that a Micro SME owner or staff member can implement immediately.

To accommodate different learning styles and experience levels, each module *is suggested to be delivered* in two tiers (if possible):

- Beginner: Introduction to key concepts with a live or recorded demonstration
- Doer: Guided, hands-on practice that results in a tangible business output

Advantage: *Conducting in this manner can help participants to quickly get feedback on what they have learned, how to apply it, and adjust their knowledge accordingly through the hands-on practice.*

Disadvantage: *Conducting this hands-on exercise, the length of the workshop will depend on how fast every participant can work through the hands-on exercise, step-by-step.*

Suggestions to Local Implementers (Modes of Content Delivery)

2. Live Demo-Based Training with Real Tools (Flexible Delivery)

To suit the diverse schedules and digital capabilities of MSMEs, tool demonstrations can be delivered through a combination of recorded content, documentation, and optional live engagement opportunities.

a. Recorded Video Demonstrations

- Pre-recorded, step-by-step video tutorials showcasing practical tasks using tools such as Google Sheets, Gemini, Google Forms, Canva, and others
- Videos can be short (5–10 minutes per task) and are designed for both desktop and mobile users
- MSMEs can pause and revisit videos at their convenience, supporting self-paced learning

b. Documentation with Screenshots and Guides

- Each video and module can be supported with simple, illustrated how-to documents with annotated screenshots
- Documentation can include setup instructions, common use cases, best practices, and troubleshooting tips
- Most materials are provided in editable formats to allow easy localisation by country partners

Suggestions to Local Implementers (Modes of Content Delivery)

c. Q&A Sessions with Experts or Tool Vendors (Optional)

- Live or pre-recorded Q&A sessions can be arranged with tool experts or certified trainers (e.g., Google or Canva representatives)
- Formats can include monthly AMA (Ask-Me-Anything) sessions, panel-style discussions, or MSME case-sharing webinars

d. Self-Guided Practice Activities

- After each demonstration (selected tools), participants can be given practical checklists and exercises to apply the tools to their real business scenarios
- Trainers may encourage sharing outcomes within local groups or chat forums to build community learning

e. Sector-Specific Adaptation Guidance

- Local trainers can be supported with guidance on tailoring demos to local industries, ensuring examples are relevant and relatable
- You may refer to the AI Use Cases for references

Suggestions to Local Implementers (Modes of Content Delivery)

Advantage: *Conducting in this manner can suit the learning velocity of each participant, through self-service. There can be consistent engagement, since participants are learn at their own velocity.*

Disadvantage: *There is no immediate feedback from the trainer, and mistakes or misunderstandings may not be caught upfront easily.*

Suggestions to Local Implementers (Modes of Content Delivery)

3. Worksheets and Cheat Sheets with Screenshots

Each module can include printable and downloadable worksheets to reinforce learning. These may include (some have been provided in the [Resources Hub](#)):

- Business-focused worksheets (e.g., “My AI Marketing Plan,” “Prompt Writing Practice,” “Automation Planner”)
- Cheat sheets featuring step-by-step screenshots and tool interface annotations for less tech-savvy participants
- Mobile and desktop-friendly formats can be offered, with localised screenshots where appropriate

Advantage: *Conducting in this manner can suit the learning velocity of each participant, through self-service. There can be consistent engagement, since participants are learn at their own velocity.*

Disadvantage: *There is no immediate feedback from the trainer, and mistakes or misunderstandings may not be caught upfront easily. Participants may not know the thought process behind how the worksheets are designed, the learning objectives and be able to adopt the knowledge.*

Suggestions to Local Implementers (Modes of Content Delivery)

4. Downloadable Templates (Ready-to-Use)

Participants can receive access to a library of practical, editable templates that they can duplicate and customise for their business needs. Templates include:

- Social media caption templates in multiple tones and local languages
- Product description builders (e.g., [Problem] + [Solution] + [Why You])
- WhatsApp message templates for order confirmations and customer support
- Simple invoice, tracker, and inventory sheets (Google Sheets format)
- [AI prompt library](#) categorised by use case (e.g., marketing, admin, planning)
- All templates will be designed to work within Google Workspace for ease of use and accessibility across devices.

Advantage: *Conducting in this manner can suit the learning velocity of each participant, through self-service. There can be consistent engagement, since participants learn at their own velocity.*

Disadvantage: *There is no immediate feedback from the trainer, and mistakes or misunderstandings may not be caught upfront easily. Participants may not know the thought process behind how the worksheets are designed, the learning objectives and be able to adopt the knowledge.*

Guidelines for Using Curated YouTube Videos in Training Materials

1. Use Videos Fairly and Legally

- Only use YouTube videos **for educational purposes** in line with **fair use/fair dealing principles**.
- Avoid downloading videos using converters or screen recording tools **unless you have obtained explicit permission or the video is licensed for such use**.

2. Embed Instead of Download

- Always **embed** the video directly from YouTube into your presentation, Learning Management System (LMS), or slide deck using YouTube's official embed function.
- **Do not** download, alter, or re-upload the video into your own materials unless you have the proper licensing or rights from the original creator.

3. Attribute the Creator Properly

Whenever a YouTube video is used, **credit the original creator**. Include the following information where possible:

- **Name** of the creator or channel
- **Video Title**
- **Link** to the original YouTube video
- **License**, if specified (e.g., Creative Commons)

AI-powered features in Google's NotebookLM “AI Studio”

1. Source-Aware Research & Citations

- **Upload and connect sources:** Add PDFs, Google Docs, or pasted text. The AI reads only what you provide, so responses stay focused and cite back to those sources.
- **Contextual Q&A:** Ask natural-language questions and get concise answers with inline citations linking to the original document passages.

2. Automatic Summaries & Outlines

- **Instant summaries:** Generate bullet or paragraph summaries of long documents.
- **Structured outlines:** Turn raw research into sectioned outlines for articles, reports, or podcasts. You can adjust tone or level of detail with simple prompts.

3. Idea Generation & Drafting

- **Brainstorming assistant:** Request headlines, titles, or content angles based on your uploaded material.
- **Smart drafting:** Expand an outline into full text—blog posts, scripts, lesson plans—while preserving key facts from your sources.

4. Dynamic Notebooks

- **Linked notes:** Highlight text and create AI-generated notes that stay linked to their original sources.
- **Cross-note reasoning:** The AI can answer questions across all notes in a notebook, weaving insights from multiple documents.

5. Audio Overview / Podcast Preview

- **One-click narration:** After you finish drafting, click “Audio Overview” to have NotebookLM automatically generate an AI-voiced audio summary.
- **Podcast-style output:** Produces a natural-sounding, conversational recap you can share or embed, perfect for turning research into a quick listening experience.

6. Collaborative Editing & Export

- **Real-time collaboration:** Invite teammates to comment or edit.
- **Flexible export:** Copy to Google Docs, download as text/markdown, or share a public link to the finished notebook or audio.
